

DISPLAYING IMAGES AND OTHER INFORMATION

Abstract of the Invention

Systems and methods for receiving broadcast video images and other information enable users to receive and view both the broadcast video images and user-selected Internet-obtained video and/or data simultaneously. The broadcast video images and the user-selected Internet-obtained video and/or data can be displayed on a single monitor utilizing picture-in-picture or side-by-side technology and can include a broadcast display and a plurality of other data displays for the Internet-obtained video and/or data.
